Pay-By-Face

A Smarter, Simpler Way to Pay
with Just Your Face

No cards. No phones. No hassle.
Just you.

Problems with Traditional Payment Systems

1

Carrying Physical Cards

Wallets get lost, cards get misplaced, and it's easy to forget them.

2

Security Risks

Cards and passwords can be stolen, duplicated or hacked, putting your funds at risk.

The Face Payment Solution

Just look, get matched, and pay.
It's fast, secure and effortless.

Pay-By-Face

Where Biometrics Meet Web3

Pay-By-Face is the first decentralized application to seamlessly integrate facial biometric verification with blockchain-powered payment authorization.

Real-time face verification
replaces passwords entirely.

Payment authorization
requires no credentials to remember.

Every transaction is recorded
as an immutable entry on the blockchain.

 **Face Authentication** Active

Enroll your face to sign in without a password and to receive coins via face scan. After enrolling, a 4-digit payment PIN will be set — required every time a face payment is made. A confirmation email will be sent to verify you are the account owner.

Pay-By-Face

Your Face. Your Wallet. Powered by Blockchain.

Novelty

Why It Matters? (And Why It's Necessary)

In today's world, people need faster, safer and easier ways to pay. Pay-By-Face brings together facial recognition and blockchain to make payments simple, secure and effortless for everyone.

1 Your face is verified
(in real time)

2 Payment is authorized
(no password, no PIN)

3 Transaction is saved
(on the blockchain)

Real Impact in the Society

Saves time
No more waiting or passwords.

Keeps people safe
Less fraud, more trust.

Makes life easy
Simple, fast and for everyone.

Why It's Necessary

It makes life easier for people and society.
Here's how it helps:

More Safety

No need to share passwords or PINs.
Your face is unique and hard to fake.

Faster Payments

Just look at the camera and pay.
No cards, no phone, no waiting.

Less Fraud

Blockchain records every transaction.
It is transparent and cannot be changed.

Access for Everyone

Helps people without bank accounts or smartphones, especially in rural areas.

A Smarter Society

Saves time, reduces stress and makes everyday life simpler for all.

Pay-By-Face

How Pay by Face Works

1 Face Detection

Your face is captured and processed in the browser using face-api.js.

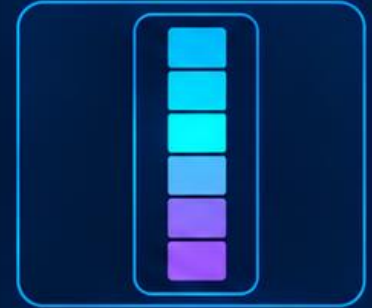

2 Landmarks

The model detects your face, finds 68 landmarks and aligns it for accurate recognition.

3 Embedding

A 128-dimensional embedding is extracted and normalized for secure matching.

Your face → 128D vector
→ Unit hypersphere

More secure
recognition

Faster
payments

No cards
or phones

Powered by
blockchain

Pay-By-Face

4

Embeddings Sent to Server

Your face data is converted into a unique embedding and sent securely to the server for verification.

5

Matched

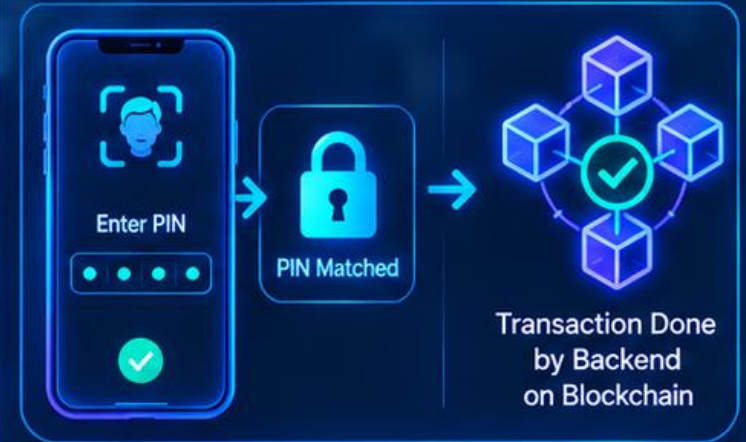

The server compares the embedding with the stored data. If it matches, your identity is verified.

6

Double Security PIN

You confirm the payment with a secondary PIN. Once matched, the transaction is processed by the backend and recorded on the blockchain.

The Future

A smarter, safer, and more inclusive tomorrow —
powered by face, built on blockchain.

Beta Launch

Onboarding early adopters to validate the biometric payment flow in real-world conditions.

Security Audit

Independent third-party security review and formal compliance certification across target jurisdictions.

Mainnet Deployment

Full public launch on mainnet, paired with institutional partnership agreements for scaled adoption.
